

6 REASONS TO SWITCH TO SYMANTEC EMAIL SECURITY.CLOUD

There are plenty of reasons to switch to Symantec. Maybe your organization is moving email operations to the cloud. Perhaps it's difficult to maintain a strong email security posture against unknown threats with your existing deployment. Or perhaps your current vendor is ending support.

1 Email Security Expertise

Benefit from our experience. Highly targeted spear-phishing attacks are on the rise¹ and the need for strong email protection has never been greater. Symantec's email security expertise allows us to offer service level agreements for protection and performance that others can't match.

2 Strong Protection

Get 100% protection against known and unknown email viruses with a Service Level Agreement² to back it up.

3 Advanced URL Blocking and Advanced Threat Protection

Stop email attack campaigns in their tracks. Fast inline blocking of malicious URL links before they reach a user's inbox through Real-Time Link Following is included at no additional cost. Targeted Attack Identification by Symantec Security Response analysts identify unknown malware and inform you of the severity of an attack with Symantec Advanced Threat Protection: Email.

4 Guaranteed Availability

Stay productive with 100% service uptime and 100% email delivery, and a Service Level Agreement to back it up³.

5 Easy Migration

Switch to Symantec today. There's no new software to deploy, regardless of whether your mailboxes are on-premise or in the cloud. Just choose your configuration options and then simply redirect and secure email traffic.

6 Industry Leadership

Partner with Symantec, the global leader in cybersecurity – and the market share leader in email security⁴.

Symantec Email.cloud delivers Security, Privacy, and Control over your email.
